Attention Canadian Taxidermists

Hello everyone

Please help support the Canadian taxidermy industry by supporting Canada's taxidermy suppliers. Select Taxidermy Products Ltd will continue to expand our product line of manikins and supplies.

Canada's taxidermy supply shops continue to decrease, we can only survive through your continued support.

Thanks for your attention to this matter.

Best regards in your business ventures.

Mark Zimmermann

How to Paint Flehmen Mouthpiece Assembly by Joe Meder

Steps

1. Wash all parts with thinner to clean any molding residue or dirt (Photo 1)
2. Spray the entire palette, lower jaw, and tongue with flesh tone. Feather out the flesh tone towards the front of the palette. (Photo 2)
3. Spray black at a low or flat angle to achieve the desired gray detail of the papillae and palette. (Photo 3)
4. Lightly spray a thin wash of gill red on the palette and lower jaw to brighten.
5. Same steps can be used for the tongue, except a deeper color of red is necessary. Check your references for palette and tongue colors.
6. The septum should be sprayed with flesh only.
7. Using Burnt umber oil paint, coat the teeth with paint and wipe off until the desired staining effect is achieved.
8. Coat all parts with clear gloss and assemble. (Photo 4)

McKenzie's Joe Meder Deer Eye with Liquid Lens™ Technology

We are excited to introduce a complete new design in deer eyes by Joe Meder with a revolutionary new patent pending breakthrough effect called Liquid Lens™ Technology. To create this new eye Joe went back to the basics and began by casting eyes and lenses from fresh deer. He then took those casts to his pen of live deer to compare. Once the prototype was complete it was time to begin testing colors. Roger Martin from McKenzie and Teresa Fonder from Van Dyke's were brought in to help develop the special effect Joe was looking for. Glass eyes have always had a certain "flat" or lack of 3-D effect when it comes to the depth that can be achieved with painting. Joe was very specific in that he wanted to create the effect of how a live eye captures and reflects light. With this request Roger has invented what may prove to be one of the biggest advances in glass eye technology in years. Through a series of mold designs and painting techniques he and Teresa have achieved for the first time in taxidermy, a truly "liquid" look in the lens.

New patent pending Liquid Lens™ Technology captures and reflects light to create a live 3-D effect.

More Sizes Available!

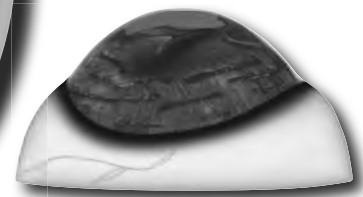

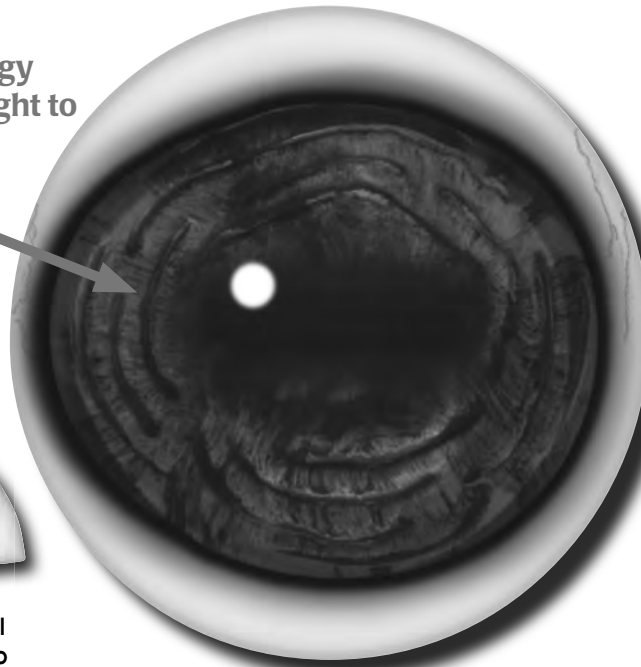

Note: The Meder eyes now have a notch in the base to indicate the front of the eye.

Front View

Back View

This NEW lens shape by Joe Meder is cast from a real deer and allows the eye lid to lay accurately on the glass.

The brown in the limbus band has been extended in the front to allow for easy setting in any deer form.

"This new 'liquid crystal eye' is the most advanced, most accurate and exciting eye I've ever seen. No effort or resource was spared in the research and development of this eye. As you can see, the clarity and depth of the iris is unrivaled; it looks alive!"

Joe Meder

"At last, I can now get the shape, color and depth that I've always wanted, but could not attain in traditional glass eyes. The new Joe Meder Liquid Lens eye is by far the best deer eye I have ever used."

Dennis Behn

Joe Meder has raised whitetail deer for over 30 years at his facility. Through his lifetime of study and experience he is one of the acknowledged experts in whitetail deer anatomy and taxidermy.

Designed and manufactured in America.

Typical Applications

A: White Tail Deer
B: Mule Deer
C: Raccoon

D: Buffalo
E: Wild Boar

The Whizard Fleshing Machine is far more accurate and much faster than fleshing with a knife. It is a lot safer and faster than fleshing with a wheel. Relative to tanning, the skin rehydrates very well because of the extra clean fleshing. The skin pickles faster and more thoroughly, making shaving faster and thinner. The skin accepts tanning agents evenly with less time allowing for greater stretch.
